Prerequisites
This procedure is used when removing the MIS filter wheel from the 2.4m telescope. Instrument rotator needs to face North.

Equipment Needed
- Canned air.
- Allen wrenches.

Hardware Installation

Disconnect the filter wheel cable.

Leave two opposite mounting bolts in place and remove all of the others.

Raise the hydraulic table and support the MIS filter wheel on a coffee can. Remove the last two bolts and lower the MIS filter wheel.
Put the cover on the MIS filter wheel.

Attach the carry handles to the MIS filter wheel.

Put the MIS filter wheel into its storage box.
